 #ffd200
 R **255** • G **210** • B **0**

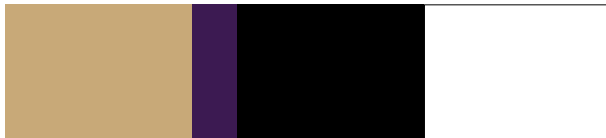

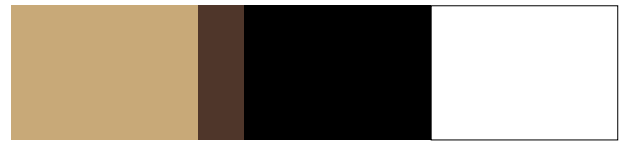

It is okay to use shades of our primary colors in your designs

HOW TO USE ACCENT COLORS

Accent colors add versatility to our Primary palette. These colors must be used sparingly in combinations with Primary colors, FADS Gold, Black and White. Accent colors must never be used in the logo or building signs. They may be used as accent colors in studio decor.

Explanation of Color Formulas

Pantone Matching System, or *PMS*

A standardized color matching system most widely used by print vendors and graphic designers. PMS colors are solid-color inks

Red-Green-Blue, or *RGB*

The three hues of light (red, green and blue), that combine to form every color on television screens and computer monitors, tablets and smart phones

Cyan-Magenta-Yellow-Black, or *CMYK*

Cyan, Magenta, Yellow and Black are the four ink colors used in offset and digital printing (often called four-color printing) for full-color documents

Hexadecimal Code, or *HEX CODE*

A numbering system for colors used in web design or other digital applications
